

S3 Fig. Format 3: Alternative package leaflet (intervention): Narrative with numbers (translation)**Side effects**

Like all medicines, Suffia® can cause side effects. However, not all side effects are necessarily caused by the intake of Suffia®. Symptoms can also occur when Suffia® is not taken.

Symptoms occurring <u>more often</u> when taking Suffia® over 5 years:	
Increased blood sugar levels	16 of 100 people with Suffia® compared to 13 of 100 people without Suffia®. In 3 of 100 people taking the drug Suffia® is the increase of blood sugar levels caused by the drug.
Slow heart rate	5 of 100 people with Suffia® compared to 2 of 100 people without Suffia®. In 3 of 100 people taking the drug Suffia® is the slow heart rate caused by the drug.
Symptoms occurring <u>less often</u> when taking Suffia® over 5 years:	
Depression	9 of 100 people with Suffia® compared to 12 of 100 people without Suffia®. In 3 of 100 people taking the drug Suffia® is depression prevented by the drug.
Symptoms occurring with comparable <u>frequency</u> when taking or NOT-taking Suffia® over 5 years:	
Anemia	4 of 100 people in each case.
